Potato steam peels Bergia

Potato peels Bergia are created when peeling and/or brushing the potatoes in a steam process. After steam peeling, a co-product is created consisting of peel and part of the starch under the peel. The starch present is gelatinized as a result of the steam treatment. Potato peels mainly contain starch and protein. The product complies with laws and regulations. Mycotoxins, insecticides, pesticides and herbicides are tested according to the GMP+ FSA. The product is non-GMO (according to Regulation (EC) 1829/2003 and 1830/2003).
