Corn energy

Corn Energy is released during the extraction and refining of glucose from corn. When the starch present in the maize is processed into glucose, the glucose is refined in one of the last process steps. This creates the product Corn Energy. In addition to easily digestible dextrose, Corn Energy contains a relatively high proportion of easily digestible unsaturated fat. As a result, the energy value of Corn Energy is high, the taste is good and it fits well in rations for insects.

The product complies with laws and regulations. Mycotoxins, insecticides, pesticides and herbicides are tested according to the GMP+ FSA. The product is non-GMO (according to Regulation (EC) 1829/2003 and 1830/2003).
