

## Renewables

### Grain residue

Grain residue is a product that is released during the processing of grains. During the sieving of grains, the smaller grains that are not suitable for the production process are sieved out. During cleaning, the chaff from the grains is released. The smaller grains and chaff are combined at the end of the production process and marketed under Grain Residuals.

**Valid from 28 July 2022**

Downloaded on 02 February 2026

DM	90.0
Ash	9
Phosphor (P)	7.8
Nitrogen (N)	18
Biogas yield	375
Methane %	59
Digestion Speed	30.0

Levels are based on averages and stated in grams per kg of dry matter, unless stated otherwise. Changes in product composition are reserved.

### Logistics & Storage

Transport	Bulk with walking floor, tipper or container truck
Storage	Bunker or silage
