

Renewables

Gum

Gum for Renewables is created during the production of vegetable oils, such as soybean oil, sunflower oil, palm oil and other oils commonly used in food and industrial processes. Water is added during the refining process of these oils to remove impurities. This results in a mixture of water, fatty acids, vegetable matter and other impurities, known as the co-product gum.

Valid from 08 June 2023

Downloaded on 02 February 2026

DM	53.0
Ash	5
Phosphor (P)	10.4
Nitrogen (N)	2
Potassium (K)	1.8
Biogas yield	550
Methane %	67

Levels are based on averages and stated in grams per kg of dry matter, unless stated otherwise. Changes in product composition are reserved.

Logistics & Storage

Transport	liquid with tanker truck
Storage	Heated tank
