

Livestock

Futtermolke BFB

Futtermolke BFB (Feed milk) is released by ultrafiltration (membrane passage) of whey during the production of cream cheese and cheese that may be (partially) desugared, thickened or dried. The permeate contains a high proportion of lactic acid, which increases the nutritional value, is tasty and promotes intestinal health. The product complies with laws and regulations. Mycotoxins, insecticides, pesticides and herbicides are tested according to the GMP+ FSA. The product is non-GMO (according to Regulation (EC) 1829/2003 and 1830/2003).
